

What is it?

RIS-Info is Windows® based software that provides a complete composite presentation package for all types of logs. The product is written for Windows and is 32-bit compliant for 98/NT/2000/Me/XP. The following file formats are supported:

- LAS
- LBS
- LIS
- ASCII

Mudlogs, wireline logs, MWD/LWD, survey and test data are provided at the wellsite by the service companies, often in multiple files, and in a variety of formats. *RIS-Info* enables the user to import all these different types of data into a single database. *RIS-Info* also stores the drawn lithology, geologic modifiers, engineering symbols, annotation text and images, which may be incorporated into the overall presentation.

The user may use one of the many plot templates that are provided with the product for data presentation, including things such as TVD and time plots. Tadpole plots can be included on the same presentation, as desired. These templates are easily modified to meet the user's specific needs, or with the assistance of a Wizard new templates can be created. There is no limit to the number of tracks or curves used on a template. The user may also create forms to present information as either a header or trailer to the log. Customization is made easy through several options that allow placement and sizing of multiple forms on a template. (See sample output)

How is it used?

Users of *RIS-Info* have found the graphics capability of this product to be extremely powerful. This is the primary strength of the product and is why Digital Formation feels this product is one of the premier graphical solutions for the E&P Industry. This group has found that the ability to import high-resolution graphics such as thin sections makes this an extremely valuable presentation tool.

The product contains all the common lithology symbols, engineering symbols and modifiers the average user needs to present his log information in an impressive manner. The user may also add additional symbols. Full color is provided to all presentations. Annotations can be stored in the database for the well.

Whether you need to present data to management or partners, *RIS-Info* will meet all your needs.

How to Order *RIS-Info*

Please contact **Digital Formation, Inc.** for pricing. To order, please call **(888) 747-5372** (US & Canada), or **(303) 770-4235**.
